

Usage of TWISTER

Spiral Lace

TWISTER Spiral Lace is stronger and more flexible. It has been specifically designed to be used in situations of high torsion, tension and abrasion such as applications running over 45° rollers. We suggest the following installation method:

- 1)** Remove a length of TWISTER spiral lace from the Lippert dispenser box and cut the length needed.
- 2)** Rewind the remaining portion back into the dispenser to protect it from dust and other contaminants.
- 3)** Set the webbing part of the spiral lace between the layers of the belt for vulcanization.
- 4)** We suggest vulcanization with a 0.051”-0.052” (1.31mm – 1.35mm) stainless steel wire in the seam to protect its form.
- 5)** For optimum results the seam should be pinned with a very tight pintle. We suggest our 0.054” (1.37mm) Nylon WN-125 reduced connection pintle inserted with our pintle lubricant.

Nylon pintles should not be used for applications involving food or high heat. Talk to one of our representatives about your application for pintle suggestions.
