

Lead Wires

Lead Wires:

The three keys in selecting a lead wire are straightness, rigidity and friction. We have a selection of lead wires to choose from including stainless steel, torsion straightened stainless steel, and oil tempered wire. The oil-tempered wire is more rigid than the stainless steel wire, however the stainless steel wire is polished, resistant to rust, and available torsion straightened. The lead wire diameter must be smaller than the diameter of the pintle filament to create smooth pintle connections.
